# City CarShare Releases Annual Report on Carsharing Impact

The largest carsharing not-for-profit in the United States has released a report quantifying the social, environmental and economic impacts of its shared vehicle fleet on the community of San Francisco. Measurable reductions in carbon dioxide emissions and vehicle miles travelled improve the city's air quality and traffic congestion. Individual member-drivers have saved thousands of dollars annually by sharing cars instead of owning their own vehicles. City Carshare plans to double the size of its electric vehicle fleet to 36 cars by the end of 2013. For more info, please see the City CarShare [factsheet](#) with all the numbers.
